Legacy RMI Orientation Manual

Version 2.3 | Internal Use Only | Last Updated: September 2019

Recall Modulation Initiative (RMI) | Linwood Institute

Welcome Message

"Congratulations on joining the future of memory!"

- Dr. Leo Linwood, Founding Director

(Note: This quote predates the current silence policy.)

Welcome to the Recall Modulation Initiative. Whether you're a newly cleared technician, vault interface analyst, or just someone who made the mistake of opening a door marked "Do Not Enter," this guide will walk you through foundational RMI concepts and help you avoid catastrophic cognitive spillover.

We believe in clarity. And fail-safes. Mostly fail-safes.

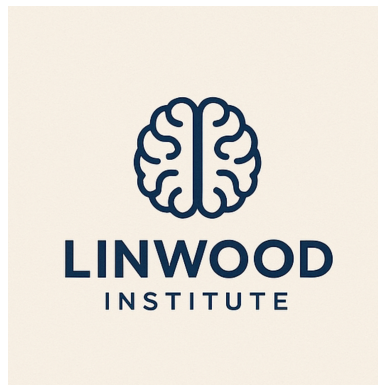

What is RMI?

The Recall Modulation Initiative is Linwood's proprietary approach to:

- Controlled memory suppression
- Identity loop stabilization
- "Gently recontextualized" experience recall

Fun Fact:

RMI's first prototype was tested on a volunteer who believed it was a meditation

retreat. He now teaches ceramics in Vermont and is very relaxed.

Vaulting Protocols (Simplified)

Vault Type	Use Case	Cautionary Note
-----	-----	-----
Type-A	Short-term trauma loops	Do not expose to looped music
Type-B	Identity segmentation	Requires ethical sign-off (or "temporary workaround")
Type-C	Deep memory burial	Staff handling Type-C vaults must sign the I3.7 Disassociation Preparedness Waiver (available in triplicate)

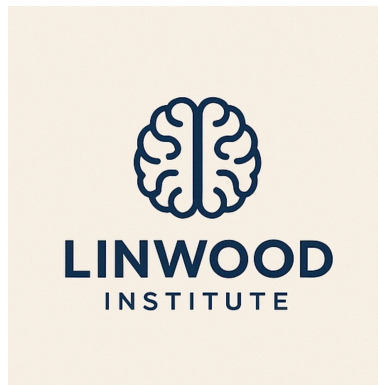

If you're unsure what vault type you're working with: Step away immediately. Also, alert a supervisor. If your supervisor *is* the vault, alert someone else.

Subject Interaction Tips

- Subjects are not to be referred to by name unless pre-approved.
- Use only designated codenames (e.g. "B-03", "The One Who Blinks Too Much").
- If a subject recognizes you, it's either a breakthrough or a clerical error. Smile and document it.

Basic Troubleshooting

Symptom	Solution
-----	-----
Subject fixated on their hands	Gently rotate lighting environment. Do not ask

why.

Unexpected memory spill | Activate Protocol 17.3 (red binder, third drawer)

Audible humming from an inactive vault | Leave the room immediately. File an incident report from outside.

Reminders

- The phrase "It's all part of the loop" is no longer considered soothing.
- Vault interface ports are not for snacks.
- The RMI project is not affiliated with any known government (especially not that one).

If You Experience Side Effects...

Please contact your designated recall officer before discussing memories of this orientation. If you can't recall who that is, you're already ahead of schedule.
